

Appln. No. 10/767,565

Attorney Docket No. 12195-004

I. Listing of Claims

1-10. (Cancelled).

11. (Original) A method for producing an interior trim part for a vehicle compartment, the method comprising:

forming a substrate of the interior trim part from a sheet of porous material loosely disposed in a forming tool;

trimming a perimeter of the substrate;

vacuum forming a cover material over the substrate;

trimming and bonding attachments to the substrate.

12. (Original) The method according to claim 11, wherein the step of forming the substrate includes:

providing the forming tool having a first and second part and a retaining portion formed at its outer periphery;

heating the sheet of porous material;

disposing the sheet between the first part and the second part of the forming tool;

applying a predetermined low pressure to the sheet using the first and second part of the forming tool to form the sheet; and

maintaining tension to the sheet at the outer periphery of the forming tool to retain the sheet freely within the first and second part.

Appn. No. 10/767,565

Attorney Docket No. 12195-004

13. (Original) The method according to claim 12, wherein the substrate material is heated to about 450°F.

14. (Original) The method according to claim 12, wherein the predetermined low pressure is between 10 and 50 PSI.

15. (Original) The method according to claim 11, wherein the step of vacuum forming includes:

positioning the substrate made of a porous material on a vacuum forming fixture;

disposing the cover material over the substrate and disposing an adhesive between the substrate and the cover material;

heating the adhesive and the cover material; and

vacuum forming the cover material to the substrate.

16. (Original) The method according to claim 15, wherein the adhesive is heated to about 250°F.

17. (Original) A method for forming a substrate from a sheet of porous material, the substrate being of an interior trim part for a vehicle compartment, the method comprising:

Appln. No. 10/767,565

Attorney Docket No. 12195-004

providing a forming tool having a first and second part and a retaining portion formed at its outer periphery;

heating the sheet of porous material;

disposing the sheet freely between the first part and the second part of the forming tool;

applying a predetermined low pressure to the sheet using the first and second part of the forming tool to form the sheet; and

maintaining tension to the sheet at the outer periphery of the forming tool to retain the sheet freely within the first and second part.

18. (Original) The method according to claim 17, wherein the substrate material is heated to about 450°F.

19. (Original) The method according to claim 17, wherein the predetermined low pressure is between 10 and 50 PSI.

20. (Original) A method for vacuum forming a cover material over a substrate of an interior trim part for a vehicle compartment, the method comprising:

positioning the substrate made of a porous material on a vacuum forming fixture;

disposing the cover material over the substrate and disposing an adhesive between the substrate and the cover material;

Appn. No. 10/767,565

Attorney Docket No. 12195-004

heating the adhesive and the cover material; and
vacuum forming the cover material to the substrate.

21. (Original) The method according to claim 20, wherein the substrate includes Azdel.

22. (Original) The method according to claim 20, wherein the vacuum is created through the porous material to form the cover material to the substrate.

23. (Original) The method according to claim 22, wherein the vacuum created through the porous substrate is configured to draw the adhesive into the porous material of the substrate.

24. (Original) The method according to claim 20, wherein the adhesive is heated to about 275°F.

25. (Original) The method according to claim 20, wherein the adhesive is a web adhesive.

26. (Original) The method according to claim 25, wherein the web adhesive is laminated to the cover material.
